## APPLICATION

Marine Coat® is a water-based, environmentally safe alternative to conventional hot-applied, solvent based and sheet membrane waterproofing systems. Since Marine Coat® cures by evaporation, a minimum application temperature of min. 40°F (4.5°C) is required. Apply in thin coats. The product cures within 24-48 hours at 70°F (21°C) and 50% relative humidity, at a thickness of 40 mils (1mm).

For best results, surfaces must be dry and free of dirt, debris, oil or grease. Application is not recommended if rain is imminent, or in high humidity environments.

Marine Coat® is applied between 20-30 ft<sup>2</sup>/gal (0.3-0.7 m<sup>2</sup>/litre) to produce a 40-60 mil (1-3 mm) protective membrane. Marine Coat® dries to the touch within minutes at 70°F (21°C). Curing time will vary depending on temperature and relative humidity.

## LIMITATIONS

\*Marine Coat® is mildly alkaline. When applying this product observe appropriate safety precautions, wear gloves, eye protection and other suitable protective equipment. For further information please consult the product MSDS.

Marine Coat® should not be applied when the ambient temperature is below 40°F (4.5°C). The uncured membrane may be damaged if frozen. Some surface base coats, such as coal tar are unsuitable for use with Marine Coat.®

## CAUTION

For industrial use only. Keep out of reach of children. Avoid storage below 40°F (4.5°C). Please consult the MSDS before using Marine Coat.®
